

METHOD AND APPARATUS FOR EDITING A PRODUCTION DATA STORE BY SHADOWING CONTENT

5

ABSTRACT

Improvements in the creation, maintenance and management of web based information are provided. A development environment conducive to separation of tasks and data, works in combination with the means to present views of changed information for approval to users. Data from file systems and database systems can be combined to create a rich source of material for users, while changes to such material can be effectively controlled and released for production.
